

BRUCELLA AGAR (7120)

Intended Use

Brucella Agar is used for the cultivation of *Brucella* spp. and other fastidious microorganisms.

Product Summary and Explanation

Brucella Agar is prepared according to the APHA formula for Albimi Broth.¹ Brucella Agar is a general purpose medium for the cultivation of *Brucella* spp. and fastidious microorganisms including *Streptococcus pneumoniae*, *Streptococcus viridans*, and *Neisseria meningitidis*.² With the addition of blood, Brucella Agar is used to determine bacterial hemolytic reactions.² Brucella Agar can be used as a base for the isolation of *Campylobacter* spp.²

Brucellosis is a zoonotic disease with a domestic-animal reservoir.³ Transmission by milk, milk products, meat, and direct contact with infected animals are the usual routes of exposure.³

Principles of the Procedure

The nitrogen and carbon source is provided by Enzymatic Digest of Casein and Enzymatic Digest of Animal Tissue in Brucella Agar. Yeast Extract is the vitamin source. Dextrose is the carbohydrate. Sodium Chloride maintains the osmotic environment. Sodium Bisulfite is added to enhance growth. Agar is the solidifying agent.

Formula / Liter

Enzymatic Digest of Casein	10 g
Enzymatic Digest of Animal Tissue	10 g
Yeast Extract	2 g
Sodium Chloride	5 g
Dextrose.....	1 g
Sodium Bisulfite	0.1 g
Agar	15 g

Final pH: 7.0 ± 0.2 at 25°C

Formula may be adjusted and/or supplemented as required to meet performance specifications.

Precautions

1. For Laboratory Use.
2. *Brucella* spp. are classified as Biosafety Level 3 pathogens. Procedures with live cultures and antigens must be confined to Class II biological safety cabinet (BSC).³
3. IRRITANT. Irritating to eyes, respiratory system, and skin.

Directions

1. Suspend 43 g of the medium in one liter of purified water.
2. Heat with frequent agitation and boil for one minute to completely dissolve the medium.
3. Autoclave at 121°C for 15 minutes.

Quality Control Specifications

Dehydrated Appearance: Powder is homogeneous, free flowing, and light beige.

Prepared Appearance: Prepared medium is trace to slightly hazy and yellow beige. Prepared with 5% sheep blood, medium is opaque and red.

Expected Cultural Response: Cultural response on Brucella Agar at 35 ± 2°C under CO₂ (Brucella sp. only) and examined for growth after 18 - 96 hours incubation.

Microorganism	Approx. Inoculum (CFU)	Expected Results
<i>Brucella ovis</i> ATCC® 25840	10 – 300	Growth
<i>Escherichia coli</i> ATCC® 25922	10 - 300	Growth
<i>Streptococcus pyogenes</i> ATCC® 19615	10 - 300	Growth

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure

Refer to appropriate references for a complete discussion on the isolation and identification of *Brucella* spp.^{4,5}

Results

Refer to appropriate references for results.

Storage

Store sealed bottle containing the dehydrated medium at 2 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light by keeping container tightly closed.

Expiration

Refer to expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if appearance has changed from the original color. Expiry applies to medium in its intact container when stored as directed.

Limitation of the Procedure

Due to nutritional variation, some strains may be encountered that grow poorly or fail to grow on this medium.

Packaging

Brucella Agar	Code No.	7120A	500 g
		7120B	2 kg
		7120C	10 kg
